

John Mwangi Maina

Water is an essential part of all life on the globe. Plant and animal could not live without water. Water ensures food security, livestock security, maintain organic life, industrial production and to conserve the biodiversity and environment. Hence, there could no life without water. With the God's gifted earth is the only planet, so far we know that it possess water and this makes it fit for human living and other living organisms to exist on it.

This precious substance which are not properly utilize by mankind and increasing demand due to growing population and unsuitable lifestyle, many countries are facing sever water crisis. Year by year per capita availability of water is decreasing which threats to human life in many ways. If proper planning and corrective measures are not taken up in the proper place and proper time many developing countries will have to face declining in food production and water security in the near future.

Kenya has enough potential for water resources, but due to improper management of water, destruction of many of our available natural resources which conserves the water, unsuitable lifestyle, over-exploitation of some sectors of available water which lead extreme situation in many parts of the country. At this movement we need to give immediate attention to make sustainable use of the available water resources.
